SOUND SCIENCE FOR BETTER SEX

Sexual satisfaction is a key part of a woman's physical and emotional well-being

It's research validated -

- Studies from around the world show a healthy and happy sex life means more than just post-orgasmic endorphins
- A satisfying sex life impacts everything from longevity and heart disease to mental health and relationships
- Enhance your sexual satisfaction, and you enhance everything else

Better Sex. Better Life.

Yet many women experience less sexual satisfaction than they would like

The "**Pleasure Gap**" is the well-documented gap between how much pleasure men and women experience during sex

Only **33%** of women reach an orgasm every time – vs. **75%** of men

- **30%** of women have trouble climaxing at all
- Only **20%** of women can orgasm from penetration alone
- Yet, women have **8000 nerve endings** in the clitoris – **2x** the number in the penis

As women age, various factors can lead to a cyclical decline in sexual satisfaction and arousal

- A variety of mental and physical factors have a negative impact on female sexual satisfaction:
 - Hormones
 - Menopause-related problems, including vaginal dryness and pain with sex further
 - Job stress
 - Relationship issues
- These factors can lead to the **Arousal Deficit Cycle** – where declining arousal and satisfaction lead to further decreases in arousal and satisfaction

Clovana™

Clovana is a soundwave treatment that increases clitoral responsiveness...

Leading to:

- Increased orgasm intensity & frequency
- Increased arousal and lubrication
- Greater sexual satisfaction

Clovana uses soundwave technology to stimulate the growth of new blood vessels and nerve cells in the clitoris

New blood vessels and nerve cells lead to greater sensitivity and responsiveness

Control

Acoustic Soundwaves

Clovana versus Control

Clovana focuses on the clitoris, which is key to female orgasm and arousal

- When arousal begins, the clitoris engorges with blood and enlarges, just like a penis. With continued stimulation, the response of the nerve endings leads to muscle contractions that relieve the tension of the sensation build-up. **That's an orgasm!**
- Fewer than 20% of women can orgasm without adequate clitoral stimulation
- Clovana's soundwave therapy targets the entire clitoral structure, increasing the responsiveness of the clitoral tissue

The Clitoral Structure

By increasing clitoral responsiveness, Cliovana can break the Arousal Deficit Cycle
