FEMILIFT NON-SURGICAL VAGINAL TREATMENT

This procedure qualifies for Health Savings Accounts (HSA) and Flexible Spending Plans (FLEX). FDA Cleared.

WHAT DOES FEMILIFT TREAT?

VAGINAL TIGHTENING

Over time, especially after childbirth, vaginal tissue can overstretch, creating a feeling of looseness (laxity) and reduced sensitivity in the vaginal area. This can lead to decreased satisfaction during sexual intercourse, creating a significant quality of life issue.

FemiLift™ tones and rebuilds the collagen of the vaginal walls, enhances the sensitivity of the vaginal receptors and contracts existing vaginal tissue, increasing vaginal tightness and improving sexual satisfaction.

FemiLift™ is an effective non-surgical vaginal treatment for stress urinary incontinence, vaginal laxity, and postmenopausal vaginal atrophy. FemiLift™ causes tightening of the vagina, a decrease in vaginal dryness and strengthening of the supporting ligaments surrounding the bladder and urethra. This can also benefit both the patient and her partner with increased sexual gratification.

FemiLift™ works via pulses of laser energy into the collagen layer of the vaginal mucosa, where concentrated thermal heating leads to collagen and elastin “shrinkage” and secondary regeneration, producing an increased resiliency of vaginal skin for about 12-18 months.

The procedure consists of 3 treatments spaced 4 weeks apart, with a “touchup” one year later. The results are a noticeable tightening of the entire vaginal barrel for increased friction and pleasure during sexual intimacy. If utilized in a different power mode, FemiLift is also quite effective in reversing the atrophic effects of aging in the vagina.

Over time, the natural processes of your lifecycle as a woman, such as childbirth and hormonal changes, can lead to various conditions such as involuntary urine leakage, vaginal laxity, dryness and recurring infections.

We believe that every woman deserves to enjoy her feminine wellness to its fullest and to live in harmony with her body and self.

FemiLift™ is a state-of-the-art, minimally invasive outpatient treatment that provides optimal results for various feminine conditions – regardless of your age or stage in life. It is quick, painless and completely safe, and provides highly effective results.

IS FEMILIFT RIGHT FOR ME? IT IS, IF YOU ...

- > Suffer from vaginal laxity, vaginal dryness or recurring infections and involuntary urine.
- > Are looking for a non-surgical solution for your female health concerns.
- > Want results, without experiencing pain or taking off time.
- > Are interested in a single solution that can effectively solve a variety of problems.
- > Seek a solution that is easily integrated into your general feminine healthcare and lifestyle.
