

FAQs

What is Medical Infrared Treatment?

Advanced technology, medical grade light treatment uses infrared light, not laser, to penetrate into soft tissue, muscle and joints. It rapidly reduces inflammation of soft tissue, muscles, and nerves.

Does the treatment hurt?

No. Medical grade infrared light is not a laser. It feels warm, but not hot. It has no known side effects.

How long does the treatment take?

Treatments take approximately 15-30 minutes depending on the surface area. Treatments can be repeated in 2-4 weeks if needed.

How long does it take for results?

In a single treatment, the average patient achieves approximately 50 to 80% reduction in pain. Some patients achieve 100% relief from pain.

What is the difference between medical infrared treatment and home infrared treatment?

Power. Medical Infrared Light is significantly more powerful. 30 minutes of medical infrared light treatment = 40 hours of home infrared light treatment.

TESTIMONIALS

"Four years after knee replacement I have pain that keeps me from sleeping more than 4 hours a night. The medical infrared treatment was very helpful. My knee aches less and the swelling is better too."

- Patient Age 50, Knee Pain

"My low back has bothered me for years, especially at night when I try to get comfortable and sleep. Dr Reil did one treatment six months ago and I have been pain free since about a week after that first treatment. She helped me to modify my habits to protect my low back too."

- Patient Age 63, Back Pain

"The flares of nerve pain in my face are less frequent and minor compared to before having medical infrared treatment. What a simple yet effective treatment. I highly recommend this for anyone with trigeminal neuralgia. Treatment is painless, the light feels warm but not hot."

- Patient age 75, Trigeminal Neuralgia

TESTIMONIALS

"My sports injury could have been career ending for playing college basketball. MRI showed an avulsion fracture and ligament injury in my ankle. Four months later it had not healed and I couldn't get the vertical height shooting 3-point shots. Dr. Reil did medical infrared treatments once a week for 5 weeks. My ankle healed fully in 5 weeks and I was able to use my scholarship playing Division One basketball."

-Patient age 22, Ankle Sports Injury

"Nobody told me that after bilateral mastectomy the tiny nerve endings would come back to life – making it hard to get comfortable and interfering with my sleep. Just one Medical Infrared Light treatment significantly reduced the annoying, almost constant pain."

-Patient age 65, Breast Nerve Pain After Mastectomy

"I had 3 failed surgeries including the cyber knife for the nerve pain on one side of my face. My daughter read a study that used medical infrared light to successfully treat trigeminal neuralgia pain. Dr Reil did 8 treatments on my face spaced 4 weeks apart. My pain went from 10/10 to less than 1/10 over a 3-month timeframe and I was able to wean completely off of the 2700mg of Neurontin I was using daily. I am still pain free 10 years later. Forever grateful!"

-Patient age 71, Trigeminal Neuralgia

What conditions can the treatment help?

- Back Pain
- Hip Pain
- Trigeminal Neuralgia
- Hand Pain
- Bells Palsey Pain
- Tailbone Pain
- Trigger Points
- Frozen Shoulder
- Shoulder Pain
- Wrist Pain
- Ankle Pain
- Neck Pain
- Carpel Tunnel
- Knee Pain
- Foot Pain
- Sports Injuries
- Plantar Fasciitis

TESTIMONIALS

"My tailbone was injured many years ago and it just would not heal. I could not sit on a hard surface and it was so difficult to get comfortable sitting for long periods of time, for instance traveling in the car. After having one medical infrared treatment I was able to sit for long periods. The only discomfort left was pain when pushing directly on the tailbone. After the second treatment, the pain has not returned. Wow."

-Patient age 49, Tailbone Pain

"My SI Joint pain flares up with activities like cross country skiing and doing home projects. The pain could be severe (8/10) making it hard to walk and flares could last for months. After years of suffering with SI joint pain, I tried medical infrared light treatment which has healed my joint. It has been 3 years since my last flare."

-Patient age 56, SI Joint Pain

"I was diagnosed with frozen shoulder after an injury. It was really painful and Physical Therapy did not help. I was unable lift my arm above my head. After the first medical infrared treatment I was at least 50% improved with range of motion and pain. I did two more treatments four weeks apart and was finally able to do the home exercise program that the Physical Therapist gave me. My shoulder is no longer frozen and I did not have to do surgery."

-Patient age 73, Frozen Shoulder
